Reservation deadline 11.1. 2013

Dear Sir/Madam,

We invite you to participate in the 1st Internet of Education Conference in Ljubljana, Slovenia, on November 11-12, 2013. The objective of the conference is to identify and define how emerging technologies based on artificial intelligence (AI), computer-human interaction (CHI), automatic assessment, visualization, user analytics, social collaboration, machine translation (MT) and video capture systems can contribute to the creation of new trends in education.

The 1st Internet of Education Conference is a continuation of the successful workshop, Co-creation of Emerging Trends in Academia, following which VideoLectures.Net, a global web portal for academic videos managed by the "Jožef Stefan" Institute in Ljubljana, was recognised by the UN and UNESCO as one of the most outstanding examples of creative and innovative e-Content in the world in the last decade. The theme and goals of this conference are in line with UNESCO's vision and activities to support Member States in building inclusive, participatory and robust 21st century knowledge societies, one of the reasons why the event has been granted the patronage of UNESCO.

We believe that university members and faculty from the South East Europe (SEE) region would greatly benefit from attending this event. We welcome faculty, policy makers, researchers and new media publishers, and believe this event will provide a great opportunity for you and your learners to find out what is going on 'behind the scenes' of the many novel approaches being taken to online education in recent years.

The conference will stretch over two days and be held at Hotel Slon, Ljubljana, Slovenia. Participants are strongly encouraged to attend both days.

Sincerely,
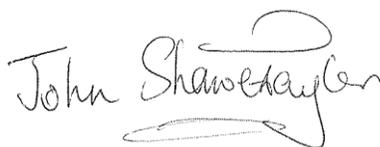

John Shawe-Taylor
Internet of Education 2013 Chair
Head of Computer Science Department, University College London and
Director of Knowledge 4 All Foundation Ltd.
